

TECLOG3 Feature List

The premier software for conducting big building air leakage tests just got better

FEATURES

- Wirelessly connect up to 16 DG-700 gauges (when used with the TEC WiFi Link) , or use CAT5 cabling to connect to gauges up to 4,000 feet away, allowing you to measure pressures and place fans anywhere in the building for best results.
- The only software available to see and track real-time building pressure and fan flow measurements, all possible because of our unique, easy-to-use interface and graphing capability.
- Electronic averaging of multiple building envelope pressures integrated with Master Cruise Control makes computerized control of multiple Blower Door fans a snap.
- Quickly and easily select time periods to use in airtightness test results, built-in calculations and reporting features which includes a USACE compliant report.
- Works seamlessly with the most accurate pressure gauge on the market, the DG-700. The DG-700 meets the accuracy requirements for all building performance test standards worldwide.
- Computerized control of individual fans allow you to conduct “guarded tests” and other advanced testing procedures.
- Easy configuration of data logging features including sampling rates, auto-zero intervals, pressure channel types (envelope, fan flow, interior or pressure) and graph display options.
- Can be used on any PC, laptop or tablet running Windows 8, 7, Vista or XP.
